Arduino Networking

Marco Schwartz

Arduino Networking Marco Schwartz

Connect your projects to the Web using the Arduino Ethernet library

About This Book

- Learn to use the Arduino Ethernet shield and Ethernet library
- Control the Arduino projects from your computer using the Arduino Ethernet
- This is a step-by-step guide to creating Internet of Things projects using the Arduino Ethernet shield

Who This Book Is For

This book is intended for those who want to build their own network-connected projects using the Arduino platform. You will be able to build exciting projects that connect to your local network and the Web. You will need to have some basic experience in electronics and web programming languages. You will also need to know the basics of the Arduino platform as the projects mainly deal with the networking aspects of the Arduino Ethernet shield.

What You Will Learn

- Interface the Ethernet shield with Arduino and to your Ethernet router
- Learn the basics of the Arduino Ethernet library
- Grab the content of a web page using the Ethernet shield
- Measure data and send it to a server running on your computer
- Create a data logging station with a web server running on the Ethernet shield
- Send measured data to the cloud service Xively, so it can be monitored from anywhere
- Discover how to use the Temboo web service to connect the Ethernet shield to more cloud services

In Detail

Arduino is a powerful electronic prototyping platform used by over one million people around the world. The Arduino Ethernet shield is the perfect addition to the Arduino platform to get it connected to your local network and to the Web in minutes. This book covers several projects you can build using the Arduino Ethernet shield. These projects are organized in three parts. The first part of the book will cover the basics of the Ethernet shield and the Ethernet library, such as how to run an Ethernet client that sends data to a server on your computer. The second part will make the Arduino and Ethernet shield more independent by running a web server on the Arduino board. You will learn how to create, record, and visualize data using Xively service.

The last part of the book is dedicated to the topic of the Internet of Things, with projects that connect the Ethernet shield directly to the Web. You will also learn to create an account on Temboo to get access to a wide range of cloud services.

From reader reviews:

James Senters:

Do you considered one of people who can't read pleasurable if the sentence chained inside straightway, hold on guys that aren't like that. This Arduino Networking book is readable simply by you who hate the perfect word style. You will find the info here are arrange for enjoyable reading experience without leaving possibly decrease the knowledge that want to offer to you. The writer of Arduino Networking content conveys objective easily to understand by lots of people. The printed and e-book are not different in the content but it just different by means of it. So , do you even now thinking Arduino Networking is not loveable to be your top checklist reading book?

Orlando Hernandez:

Your reading 6th sense will not betray anyone, why because this Arduino Networking guide written by well-known writer we are excited for well how to make book that can be understand by anyone who have read the book. Written with good manner for you, dripping every ideas and writing skill only for eliminate your current hunger then you still skepticism Arduino Networking as good book not only by the cover but also from the content. This is one e-book that can break don't determine book by its cover, so do you still needing yet another sixth sense to pick this specific!? Oh come on your looking at sixth sense already told you so why you have to listening to another sixth sense.

Mark Johnson:

The book untitled Arduino Networking contain a lot of information on that. The writer explains your girlfriend idea with easy approach. The language is very easy to understand all the people, so do definitely not worry, you can easy to read this. The book was published by famous author. The author brings you in the new period of literary works. You can actually read this book because you can read on your smart phone, or model, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can start their official web-site and also order it. Have a nice study.

Sharon Hafer:

This Arduino Networking is brand-new way for you who has fascination to look for some information as it relief your hunger of information. Getting deeper you in it getting knowledge more you know otherwise you who still having bit of digest in reading this Arduino Networking can be the light food for you because the information inside that book is easy to get by anyone. These books develop itself in the form and that is reachable by anyone, yep I mean in the e-book form. People who think that in e-book form make them feel tired even dizzy this publication is the answer. So you cannot find any in reading a guide especially this one. You can find actually looking for. It should be here for you actually. So , don't miss the idea! Just read this e-book sort for your better life along with knowledge.
